NOAA Technical Memorandum NMFS

The National Oceanic and Atmospheric Administration (NOAA), organized in 1970, has evolved into an agency which establishes national policies and manages and conserves our oceanic, coastal, and atmospheric resources. An organizational element within NOAA, the Office of Fisheries is responsible for fisheries policy and the direction of the National Marine Fisheries Service (NMFS).

In addition to its formal publications, the NMFS uses the NOAA Technical Memorandum series to issue informal scientific and technical publications when complete formal review and editorial processing are not appropriate or feasible. Documents within this series, however, reflect sound professional work and may be referenced in the formal scientific and technical literature.

NOAA Technical Memorandum NMFS

This TM series is used for documentation and timely communication of preliminary results, interim reports, or special purpose information; and have not received complete formal review, editorial control, or detailed editing.

INTRODUCTION

The National Marine Fisheries Service (NMFS) has the responsibility of assessing the status of dolphin stocks affected by the tuna purse-seine fishery in the eastern tropical Pacific (ETP). In 1990, the Southwest Fisheries Science Center (SWFSC) conducted the fifth survey of a six-year program to monitor population trends in ETP dolphin stocks (Hill *et al.* 1991). Two NOAA research vessels were used, the *McArthur* and the *David Starr Jordan* (hereafter referred to as *Jordan*). The vessels operated concurrently in the ETP from July 28 through December 6, 1990. Approximately the same area and time period are surveyed during each year of the program. As part of this monitoring program, the SWFSC is also studying the physical and biological environment inhabited by the dolphins. This ecosystem approach will facilitate the interpretation of dolphin population trends detected by these surveys, and will provide information necessary for understanding the biological basis of ETP dolphin distribution and abundance.

The physical oceanographic research of the program is being carried out jointly with NOAA's Atlantic Oceanographic and Meteorological Laboratory (AOML), as part of their contribution to the long-term Eastern Pacific Ocean Climate Study (EPOCS) and Tropical Ocean Global Atmosphere (TOGA) programs.

This report describes the types of data collected and sampling techniques used, and summarizes data collected (including disposition of the data) for the environmental studies conducted aboard the *McArthur*. Results from the *Jordan* are available in a separate report (Philbrick *et al.* 1991).

OBJECTIVES

The primary objective of the dolphin habitat monitoring portion of the program is to provide information about the effects of large-scale environmental variation on the estimates of trends in dolphin abundance. These environmental effects are monitored by examining the relationships between dolphin distribution and oceanographic patterns and processes. These phenomena are sampled concurrently with the dolphin sighting survey by measuring regional and local changes in chlorophyll, nutrients, temperature, salinity and the occurrence of seabirds and other animals. These parameters can fluctuate both seasonally and as a result of large scale ocean-atmosphere interactions such as the El Niño Southern Oscillation (ENSO) phenomena. Studying oceanographic patterns and variability in the ETP concurrently with the fauna may reveal regional or local associations.

The studies of surface and subsurface physical properties which are conducted jointly with AOML also contribute to the objectives of the EPOCS and TOGA programs, which include developing the ability to forecast ENSO occurrences.

STUDY AREA AND ITINERARY

The *McArthur* departed San Diego, California on 28 July 1990 and returned on 6 December 1990. The cruise was conducted in four legs of approximately 30 days each, with port calls in Hilo, Hawaii; Puerto Caldera, Costa Rica and Guayaquil, Ecuador. The cruise tracks of both vessels were chosen to maximize coverage of the known ranges of the two target species, the spotted dolphin (*Stenella attenuata*) and the spinner dolphin (*Stenella longirostris*) in the ETP (Perrin *et al.* 1983).

The itinerary for the *McArthur* was as follows:

Leg 1

Departure	28 July	San Diego, California
Arrival	26 August	Hilo, Hawaii

Leg 2

Departure	30 August	Hilo, Hawaii
Arrival/Departure	27 September	Isla del Coco, Costa Rica
Arrival	29 September	Puerto Caldera, Costa Rica

Leg 3

Departure	4 October	Puerto Caldera, Costa Rica
Arrival	2 November	Guayaquil, Ecuador

Leg 4

Departure	7 November	Guayaquil, Ecuador
Arrival/Departure	4 December	Isla de Guadalupe, Mexico
Arrival	6 December	San Diego, California

MATERIALS AND METHODS

Oceanography

While the ship was underway, temperature and salinity of surface water were measured and recorded continuously in digital form. Sea water was sampled continuously from a bow intake 3 meters below the surface. Temperature and salinity were measured with a Seabird SEACAT 21 thermosalinograph¹. These data were recorded on a data acquisition system consisting of an AI08 A/D board (Industrial Computer Source) connected to an IBM PC compatible microcomputer (Holland 1990).

Conductivity, temperature and depth (CTD) device casts were made two times per night using a Seabird CTD. Each CTD cast lasted approximately 60 minutes. The CTD was lowered to 1000

¹ Reference to trade names does not imply endorsement by the NMFS.

meters and sensors connected to shipboard computers measured conductivity (salinity), temperature and pressure (depth). Water samples were collected on all CTD casts for salinity calibration and phytoplankton pigment analysis. Water samples were collected on morning CTD casts for nutrient analysis and ^{14}C -uptake incubations.

Acid-washed 1.7-liter General Oceanics Niskin bottles were retrofitted with silicon rubber o-rings in the valves and endcaps. Silicon rubber tubing was used as the closing mechanism. The ten rosette-mounted bottles collected water from eight standard depths (0, 20, 40, 60, 80, 100, 125, and 150 m) plus two additional standard light depths for primary productivity casts as described below. Ten 275 ml samples (0-150 m) were collected for chlorophyll analysis at each morning station and eight at each evening station. Extracted chlorophyll and phaeophytin were measured with a Turner Designs Model 10-005R fluorometer. At morning primary productivity stations, ten 20 ml samples (0-150 m) were collected and immediately frozen for nutrient analysis following the cruise. Three 150 ml salinity samples were collected from each cast and analyzed for the purpose of CTD calibration.

Water samples for determination of dissolved inorganic carbon uptake were collected from depths to which 100, 50, 30, 15, 5, 1 and 0.1% of the incident light penetrated. Light depths were estimated from expected euphotic zone depths calculated from pigment profiles observed on previous MOPS cruises (1986-1989) according to Morel (1988). Samples were drawn into screw cap "Vitro" glass 150 ml bottles (Wheaton Corporation) rinsed twice with sample water. 10 μCi of $\text{NaH}^{14}\text{CO}_3$ were added to each sample bottle. The sample bottles were incubated in nickel screens (Perforated Products) in an on-deck seawater-cooled Plexiglass incubator for 24 hours with natural sunlight as the light source. The screens act as neutral density filters, reducing the light intensity to the same level as that occurring at the depth from which the sample was collected. Two extra samples at the 100% and 0.1% light levels were inoculated with radioactive tracer and filtered immediately with no incubation to determine abiotic particulate ^{14}C incorporation (Chavez and Barber 1987). For determination of particulate carbon fixation, the water was filtered onto Whatman GF/F filters at <10 psi of vacuum, acidified with 0.5 N HCl and counted in 10 ml of CytoScint ES on a liquid scintillation counter following the end of the cruise. The total inorganic carbon activity was determined (at the 100% and 30% light levels) by adding 1.0 ml of incubated sample water to a scintillation vial containing 20 ml of CytoScint ES cocktail. An average of these values was used as the total amount of added activity in the calculation of carbon uptake for each sample.

Expendable bathythermograph (XBT) drops were made daily at 0000, 0800, 1200, and 1600 hours (local time). A Shipboard Environmental data Acquisition System (SEAS) was utilized. XBT data were transmitted to shore via the GOES (Geostationary Operational Environmental Satellite) every four hours. Position, date and time for each drop were recorded on NOAA XBT logs and diskettes.

Eight satellite-tracked drift buoys were deployed at predetermined locations. These buoys transmit signals which are received by NOAA satellites and transferred to the ARGOS service facility in Toulouse, France. The deployments, arranged by Don Hansen of AOML, were for EPOCS and TOGA investigations of surface currents.

Biological Observations

Seabird censuses were conducted using standard 300 m strip-transect methodology and hand-held binoculars. Weather permitting, bird observers stood shifts on the flying bridge throughout the

daylight hours when the ship was underway. Species identification, numbers and behaviors of birds were recorded, as well as associations with marine mammals, fish or flotsam. Flock compositions and occasionally individual identifications were verified using mounted 25X binoculars.

Manta tows were conducted each night immediately following the CTD station, using a 505 µm-mesh manta net with a mouth opening of 15 cm x 86 cm. A General Oceanics digital flowmeter was suspended in the center of the net mouth. The net was towed from the starboard hydrographic wire for fifteen minutes. Samples were preserved in formalin, labeled and stored.

Surface organisms were sampled during evening CTD stations to collect information on the occurrence, relative abundance and distribution of flying fishes in the ETP. Two 500-watt lamps were suspended over the side of the ship to attract animals, and a long-handled dipnet was used to collect them. Other information collected during these stations included species observed, relative abundance and pertinent environmental data (e.g., sea surface temperature and salinity, sea state and moon phase).

As part of a long-term study of the distribution and ecology of sea turtles in the ETP, all sightings of marine turtles made incidental to the systematic marine mammal and seabird surveys were recorded. The angle and distance of the turtle from the track line, an estimate of the size of the turtle and associations with birds, fish, flotsam and other turtles were also recorded. Under normal field conditions, specific identification of sea turtles other than leatherbacks (*Dermochelys coriacea*) is difficult. Therefore, in order to obtain a sample of identified individuals, turtles that passed close by the ship (usually within 50 meters) were photographed with a telephoto lens. Dead turtles were salvaged to obtain life history data, stomach contents and reproductive tracts. The salvage of dead turtles in international waters is covered by Endangered Species Permit No. 691, Modification No. 1. Importation of endangered species parts is covered by CITES permit US742057.

RESULTS

Hill *et al.* (1991) reported on the dolphin assessment methods and data collected from the 1990 *McArthur* cruise.

The cruise track for the *McArthur* is plotted in Figure 1. Table 1 lists the total numbers of environmental and biological samples, by category, collected on the *McArthur*.

Oceanography

Digital records of continuous surface data from the thermosalinograph are now being analyzed at the SWFSC. Plots of continuous environmental data from the 1986-1989 surveys have been published in a separate report².

Figure 2 shows the locations of the 204 CTD casts. Analysis of discrete salinity samples for CTD calibration was performed on the *McArthur*. Uncorrected CTD temperature and salinity data are included in Appendix A.

²Fiedler, P.C., S.B. Reilly, S.N. Sexton, R.S. Holt and D.P. DeMaster. 1990. Atlas of eastern tropical Pacific oceanographic variability and cetacean sightings, 1986-1989. NOAA-TM-NMFS-SWFSC-144, 142 pp.

The SEAS XBT data were sent to the National Ocean Service, NOAA³. Figure 3 shows XBT deployment locations.

Discrete chlorophyll samples were analyzed at sea and data were processed at the SWFSC in La Jolla. Results for all four legs are presented in Appendix A. Surface chlorophyll concentrations from both the *Jordan* and the *McArthur* are mapped in Figure 4.

Selected frozen nutrient samples were shipped to Monterey Bay Aquarium Research Institute to be analyzed. Nutrient and chlorophyll data will be submitted to NOAA/National Oceanographic Data Center.

Primary productivity samples were analyzed after the cruise at Scripps Institution of Oceanography. The data were processed at the SWFSC in La Jolla. A manuscript describing the results has been submitted for a special issue of *Limnology and Oceanography* (Fiedler et al. 1991).

Table 2 lists the locations and dates of the eight drifting buoy deployments. Figure 5 shows the tracks of these buoys.

Biological Observations

A total of 923.1 hours during 109 days was spent on effort for the seabird distribution and abundance survey. During this time, 6656 individuals of 63 seabird species were recorded (Tables 3 and 4).

Abundance of seabirds varied according to the area surveyed, a fact evidenced by the differences in abundance by leg (Tables 3 and 4). In general, the most abundant family of seabirds was Procellariidae (petrels and shearwaters), primarily represented by Juan Fernandez Petrels and Wedge-tailed Shearwaters. The second most abundant family was Oceanitidae (storm-petrels), primarily represented by Leach's and Galapagos Storm-Petrels. Red-footed Boobies were also abundant.

Manta tow samples have been sorted and are now being identified at SWFSC.⁴

Figure 6 shows the location of 144 dipnet stations occupied during the cruise. Table 5 summarizes data and specimens collected for each of the stations. A total of 235 flying fish of approximately 11 species were collected, along with 100 *Oxyphorhamphus micropterus* and 620 miscellaneous fish, including 584 myctophids. Most of the specimens, including all of the flying fish, will be processed and housed at the Museum of Natural History, Los Angeles.

A total of 20 mahi mahi (*Coryphaena hippurus*) were examined for stomach contents. There were 28 sightings of sea turtles, all unidentified, which are plotted in Figure 7.

³ Persons wishing to receive copies of these data should write to: National Ocean Service, Universal Bldg. South, Rm. 618, 1825 Connecticut Ave., NW, Washington, D.C., 20235.

⁴ Questions concerning these samples may be addressed to Dr. Geoff Moser at the SWFSC.

ACKNOWLEDGEMENTS

Many people contributed to the success of this cruise. We especially wish to thank the following people whose invaluable efforts made this project possible: J. Ellingson and D. Niemer of the *McArthur* for their logistical assistance and data collection; the officers and crew of the NOAA ship *McArthur* for their considerable time and skilled efforts; the marine mammal observers and Tom Staudt and Mike Force (bird observers) for their assistance with data collection on ancillary projects; C. Oliver for data programming support; R. Holland for many of the plots and assistance in procurement and computer logistics and B. Watkins for providing support in procurement. We are grateful to I. Barrett, R. Neal and D. DeMaster for their continued support during the cruise preparations and during the cruise itself.

2	90-07-30	1.0	23 19 N 119 53 W	1.0	2	2	24.3	34.22	125	2	3	2	3
3	90-07-31	.8	22 07 N 119 24 W	1.0	2	3	24.6	33.18	125	1	1	2	3

¹ - Records without Station numbers reflect opportunistic, or non-standard specimen collections.

² - Beaufort Scale

³ - 1 = quarter moon; 2 = half moon; 3 = 3/quarter moon; 4 = full moon; 5 = no moon; 6 = new moon.

⁴ - 1 = clear; 2 = partly cloudy; 3 = overcast; 4 = rain; 5 = other or unknown.

⁵ - 005 = Unidentified flying fish

010 = Oxyporhamphus micropterus

015 = Fodiator spp.

020 = Exocetus spp.

030 = Unidentified 4-wing flying fish

060 = Elassichthys

080 = Hemiramphidae (halfbeaks)

090 = Belonidae (needlefish)

100 = Myctophidae (laternfish)

125 = Vinciguerria spp.

200 = Scombridae (tunas)

300 = Gempylidae (snake mackerel)

400 = Coryphaenidae (dolphinfish)

500 = Other

700 = Octopoda (pelagic octopus)

900 = Sea Snake

⁶ - 1 = "a couple" (1-3)

2 = "a few" (4-8); uncommon

3 = "several" (9-15); fairly common

4 = "common" (16-50)

5 = "abundant" (51-150)

6 = "superabundant" (150+)

7 = 1000's

8 = "present"

9 = "possibly present"

⁷ - 1 = Large (mantle length > 8 inches)

2 = Medium (3 inches ≤ mantle length ≤ 8 inches)

3 = Small (mantle length < 3 inches)

APPENDIX B

SCIENTIFIC PERSONNEL

Cruise Leaders

	<u>Leg</u>
Tim Gerrodette, SWFSC	1
Paul Wade, SWFSC	2
Paul Fiedler, SWFSC	3
Debbie Palka, SWFSC	4

Assistant Cruise Leaders

Stephanie Phibbs, SWFSC	1
Cheryl Glick, SWFSC	2

Environmental Data Collection

Julie Ellingson, NOAA ship <i>McArthur</i>	1,2,4
Deanna Niemer, NOAA ship <i>McArthur</i>	1-4

Bird Observers

Mike Force, Contractor	1-4
Tom Staudt, Contractor	1-4

Marine Mammal Identification experts

Gary Friedrichsen, SWFSC	1-2
Jim Cotton, SWFSC	1-2
Scott Benson, SWFSC	3-4
Rick LeDuc, SWFSC	3-4

Marine Mammal Observers

Wes Armstrong, SWFSC	1-2
Brian Smith, SWFSC	1-2
Scott Leopold, SWFSC	1-2
Bill Irwin, SWFSC	1-2
Darlene Everhart, SWFSC	3-4
Jim Carretta, SWFSC	3-4
Joe Raffetto, SWFSC	3-4
Carrie LeDuc, SWFSC	3-4

Other Scientific Crew Members

Angel Herrera, Costa Rica	3
Pedro Ramirez, Peru	4

RECENT TECHNICAL MEMORANDUMS

Copies of this and other NOAA Technical Memorandums are available from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22167. Paper copies vary in price. Microfiche copies cost \$4.50. Recent issues of NOAA Technical Memorandums from the NMFS Southwest Fisheries Science Center are listed below:

- NOAA-TM-NMFS-SWFSC- 151 The Hawaiian Monk Seal on Laysan Island, 1988.
T.C. JOHANOS, B.L. BECKER, M.A. BROWN, B.K. CHOY,
L.M. HURUKI, R.E. BRAINARD and R.L. WESTLAKE
(September 1990)
- 152 A personal computer based system for analog-to-digital and serial communication data acquisition.
R.C. HOLLAND
(November 1990)
- 153 The nearshore physical oceanography off the central California coast during May-June, 1989: A summary of CTD from juvenile rockfish surveys.
F.B. SCHWING, S. RALSTON, D.M. HUSBY and W.H. LENARZ
(December 1990)
- 154 Proceedings of the second international conference on marine debris 2-7 April, 1989, Honolulu, Hawaii. Volumes I & II.
R.S. SHOMURA and M.L. GODFREY (Editors)
(December 1990)
- 155 The Hawaiian Monk Seal, *Monachus schauinslandi*, at Kure Atoll, 1982-83.
C.E. BOWLBY, P.D. SCOGGINS, R.T. WATSON and M.L. REDDY
(February 1991)
- 156 Research plan for marine turtle fibropapilloma results of a December 1990 workshop.
G.H. BALAZS and S.G. POOLEY (Editors)
(February 1991)
- 157 Documentation of the 1980 data verification programs and common subroutines for fixed-format data: Porpoise data management system.
C.W. OLIVER and R.L. BUTLER
(March 1991)
- 158 Report of a marine mammal survey of the eastern tropical Pacific aboard the research vessel *David Starr Jordan*, July 28-December 6, 1990.
P.S. HILL, R.C. RASMUSSEN and T. GERRODETTE
(May 1991)
- 159 Report of a marine mammal survey of the eastern tropical Pacific aboard the research vessel *McArthur*, July 28-December 6, 1990.
P.S. HILL, A. JACKSON and T. GERRODETTE
(May 1991)
- 160 Report of ecosystem studies conducted during the 1990 eastern tropical Pacific dolphin survey on the research vessel *David Starr Jordan*.
V.A. PHILBRICK, P.C. FIEDLER, S.B. REILLY, R.L. PITMAN,
L.T. BALLANCE, G.G. THOMAS and D.W. BEHRINGER
(May 1991)
